10/22/2022	0	0.4
Total	2	0.4

There were two influenza-associated hospitalization (IAH) this reporting week. This is a low number of weekly influenza-associated hospitalizations; however, this may be an early indication of a rise in flu activity that may take place in 4-6 weeks. There have been three influenza-associated hospitalizations since the end of the previous flu season. However, on average over the past 5 years the number of IAH during the first 6 weeks of flu season have remained below 10 each week.
