**Previous Week**

**Previous Week (ending 11/24/2018)**

- 3 new influenza diagnoses reported this week
- Influenza-like-illness (ILI) among emergency department visits: *Expected*
- 0 influenza-associated pediatric mortalities reported this week
- 55% of influenza hospitalizations are male, 45% female.

### Influenza Activity in Ohio and City of Cleveland

Influenza activity was classified as “local” throughout Ohio during Week 48 (ending 12/01/2018). Through Week 48 of this influenza season, Ohio Department of Health (ODH) reported zero pediatric influenza-associated mortalities among patients under age 18 years. Public health surveillance data sources indicate minimal intensity for influenza-like illness (ILI) in outpatient settings reported by Ohio’s sentinel providers. Ohio Department of Health has reported an additional 44 influenza-associated hospitalizations this week, bringing the season (2018-2019) total to 154 influenza-associated hospitalizations. State, Regional and National data is provided by the Ohio Department of Health, [ODH Influenza Activity Summary MMWR 48](#).

In the City of Cleveland activity stayed constant from Week 47 (ending 11/24/2018). More than one peak of activity may be seen during influenza season, so **any City resident over 6 months of age who has not been vaccinated this season should get the shot now to protect themselves from influenza.**

#### Influenza Detections Reported, 2018-2019\*

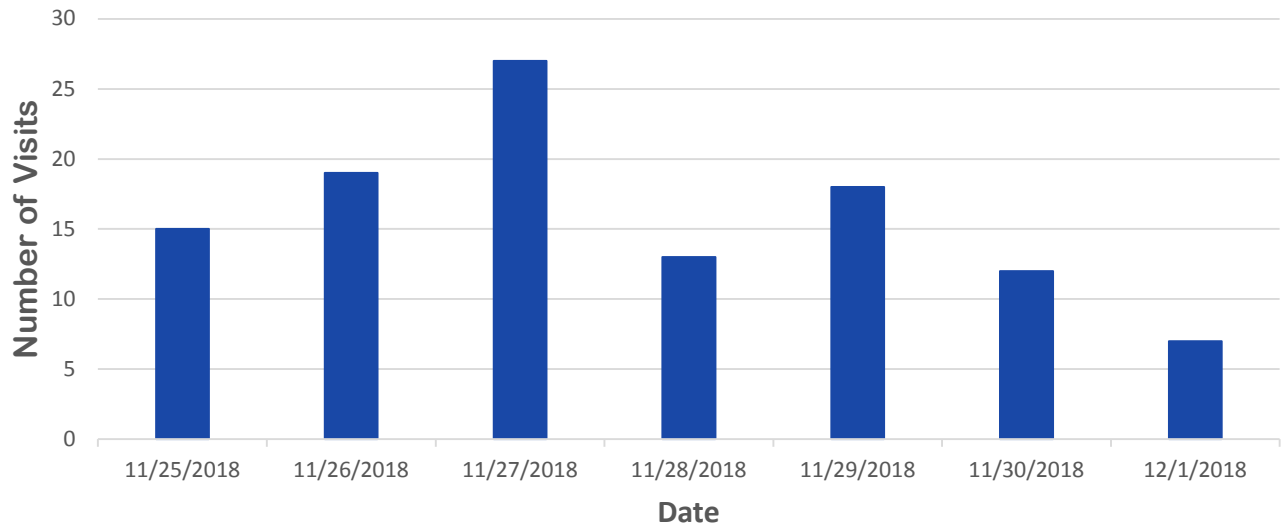

Positive Test Type/Subtype	Week 48	Total To-Date
Influenza A†	2	5
Influenza A (H1N1) Pandemic 2009	0	0
Influenza A (H3) Seasonal	0	0
Influenza B†	1	10
Influenza B/Victoria	0	0
Influenza B/Yamagata	0	0
Influenza A/B†	0	0
Influenza Subtype Unknown	0	0
<b>Total</b>	<b>3</b>	<b>15</b>

\*Data from CDC Week 40 to Week 15.

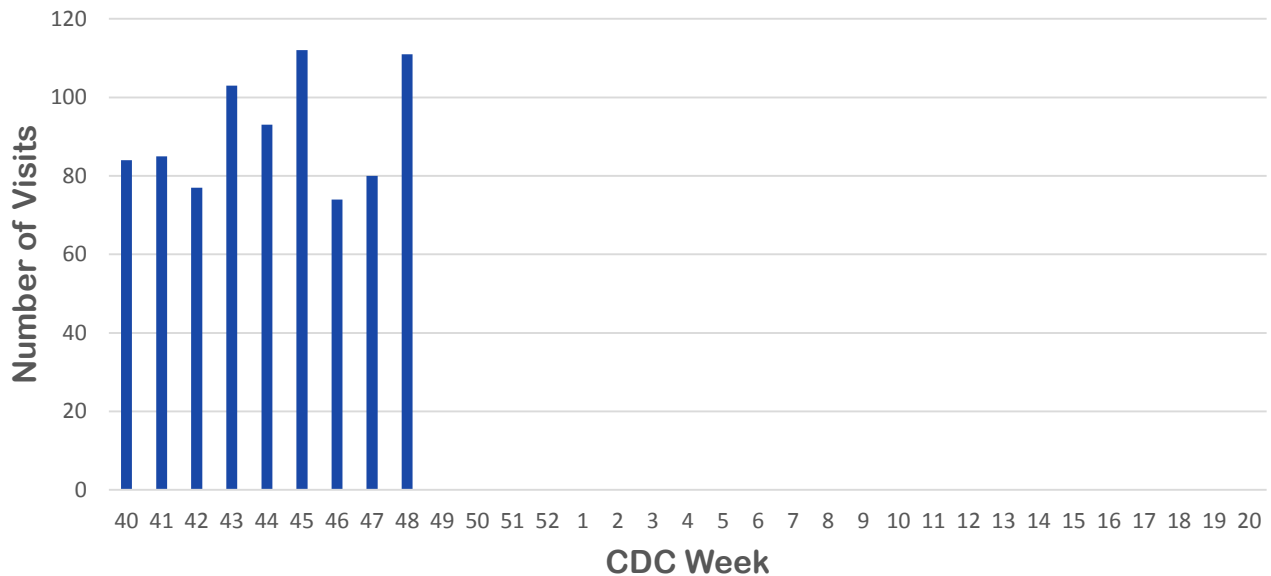

†No further characterization performed.

Note: Totals may change due to further laboratory findings
