outbreak-linked cases reported using intravenous drugs

vaccines administered to the community by CDPH

HEPATITIS A DISEASE FACT SHEET

Hepatitis A is a serious liver condition caused by a virus that is found in feces (poop) of infected people. This disease can easily spread from person-to-person and can last a few weeks to many months.

How is it spread?

Not washing hands

Sex with infected partners

Eating/drinking contaminated foods

Nausea or stomach pain

What are the symptoms?

Fatigue

Use of street or intravenous drugs

Fever

Yellowing of the eyes and skin (jaundice)

Who is most at risk in the Ohio outbreak?

Men who have sex with men

Users of street or intravenous drugs

People who are incarcerated

People who are homeless

How do I prevent it?

Wash your hands with soap and warm water before preparing or eating food and after using the bathroom or changing a diaper

Get vaccinated especially if you think you are at risk. If you think you may have been exposed to someone with Hepatitis A, contact your doctor or the Cleveland Department of Public Health to discuss your options
