

Week 4 Highlights

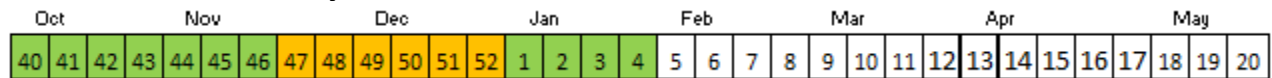

The weekly Influenza Watch summarizes the flu surveillance in the City of Cleveland. The metrics in this report include the number and percentage of emergency department visits for influenza-like illness, confirmed hospitalizations for the flu, and the deaths each week due to pneumonia and influenza.

- For the third consecutive week, flu activity remains “Low”
- 4.0% of the 524 deaths reported were due to pneumonia. No influenza deaths were reported this week and there have been 1 influenza deaths so far this season.
- 3 confirmed cases of influenza-associated hospitalization were reported this week. 36 hospitalizations due to the flu were reported this season
- 0.76% of emergency department visits were for flu-like illness
- Influenza A remains the predominant strain. The vaccine remains a good match for the current circulating strain of Influenza A.

Flu Intensity

Seasonal Flu Intensity

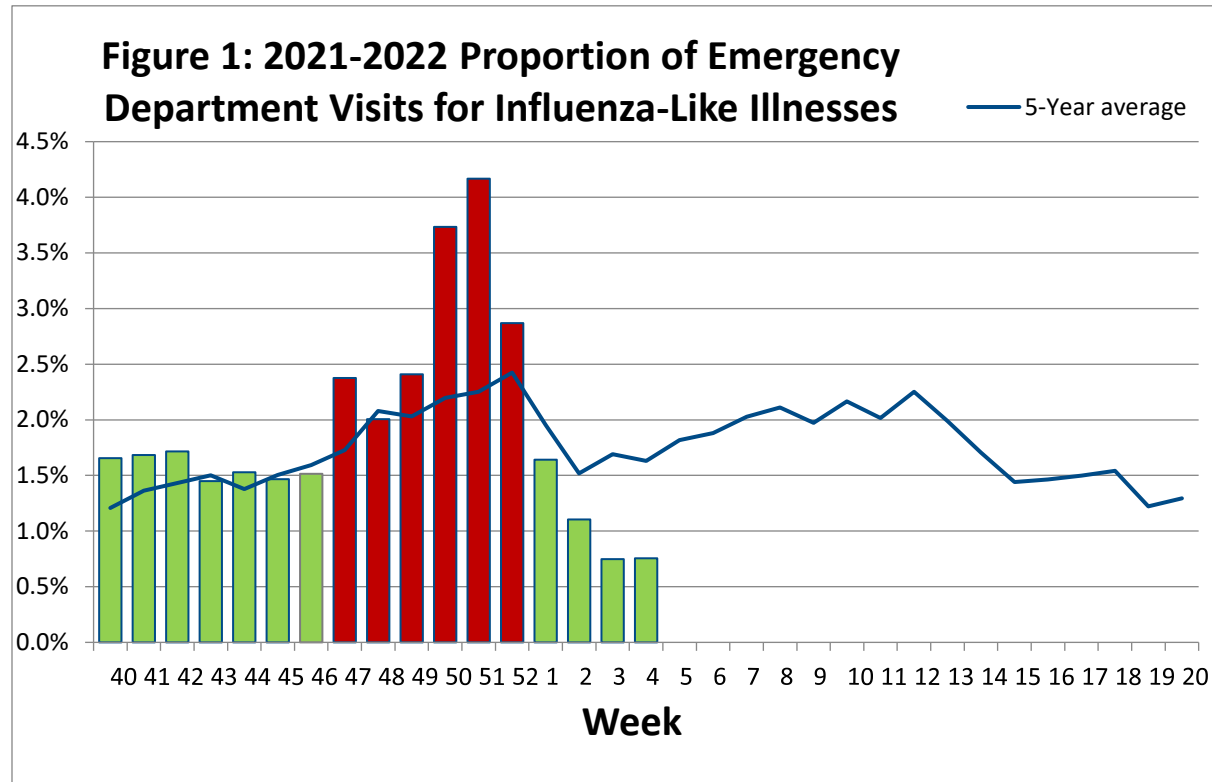

Influenza (Flu) Intensity Indicators	This Week n (%)	Activity Compared to Last Week	Season Total n (%)
Emergency Department visits for Influenza-Like Illnesses	31 (0.76%)	+0.01%	1,977 (2.02%)
Confirmed Influenza Hospitalizations [‡]	3	+2	36
Pneumonia- & Influenza-Related Deaths	21 (4.0%)	-16.2%	899 (13.7%)

*Deaths represent all deaths for Cuyahoga County. All other data presented are City of Cleveland-specific. Data are preliminary and subject to change as more information is gained.

The three indicators for calculating the intensity thresholds are based [on 2017 methodology from the Centers for Disease Control and Prevention.](#)

Influenza-Like Illnesses

LOW < 1.88%	MODERATE 1.88% - 1.94%	HIGH 1.94% - 1.99%	VERY HIGH 1.99% <
-----------------------	----------------------------------	------------------------------	-----------------------------

The proportion of Emergency Room visits this reporting week for influenza-like illnesses remains under the *low* threshold and lower than the 5-year average. This week 49% of visits were among males. Regarding race and ethnicity, 42% of visits were Black or African American individuals; 16% were among White individuals; and 42% of visits were among other racial groups. A little more than a quarter (26%) of visits were among Hispanic or Latin individuals. The median age

Data Source: Health Monitoring Systems: EpiCenter 3.5.18. Data extracted on 2/3/2022.
Low, Moderate, and High intensity thresholds are defined as the 50%, 90%, and 99% Confidence Intervals, respectively, based on the 5-Year Average of previous seasons

Influenza-associated Hospitalizations

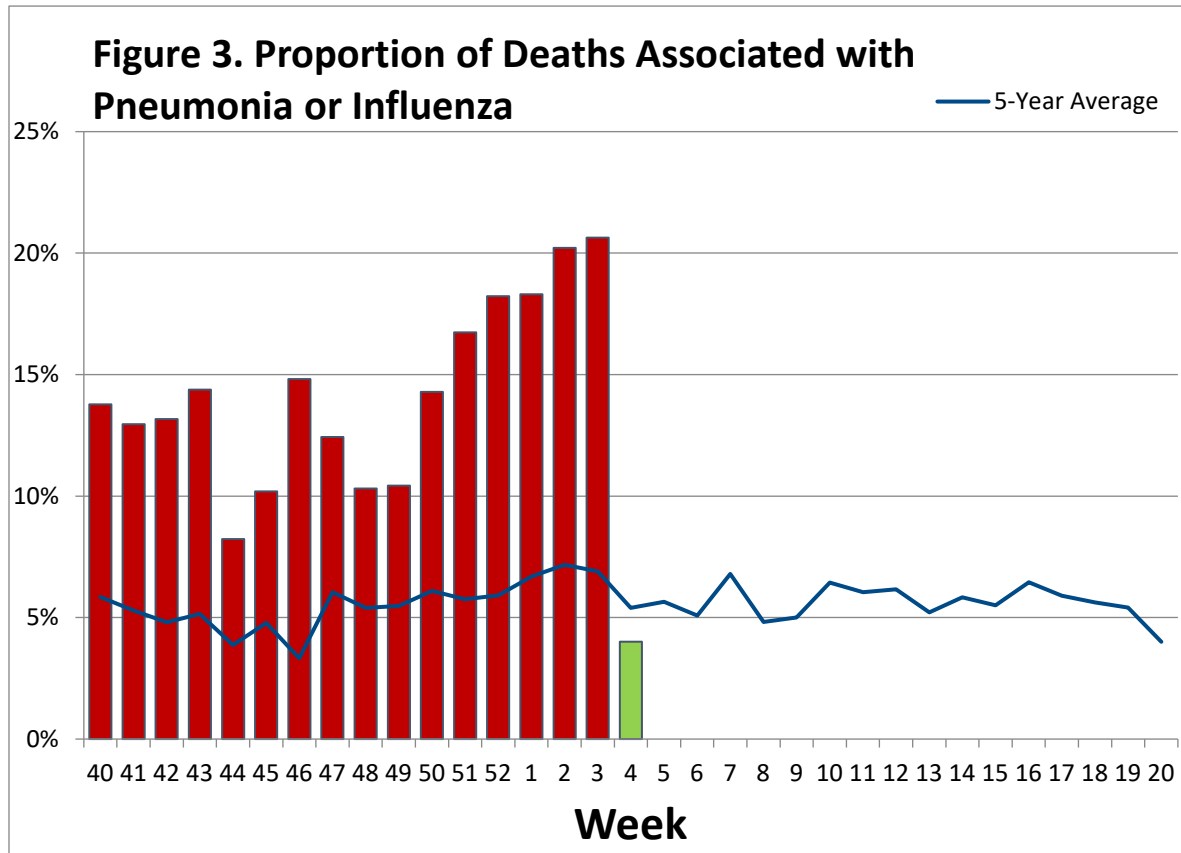

MMWR	Hospitalizations	5-Year Average
Week 44	0	1.2
Week 45	1	0.8
Week 46	1	2.2
Week 47	3	8
Week 48	10	12.2
Week 49	4	17.6
Week 50	5	29.6
Week 51	2	35.4
Week 52	3	41.0
Week 1	0	40.2
Week 2	2	33.8
Week 3	1	26.0
Week 4	3	24.2
Total	36	273.6

The number of hospitalizations remains very low compared to what has been observed over the past 5 years. Influenza A is the predominant strain currently, which was observed among all of cases this week. This week there were 3 influenza-associated hospitalizations keeping the 3 season total at 36.

Data Source: Ohio Department of Health: Ohio Disease Reporting System. Data extracted on 2/3/2022. Data are preliminary and subject to change as more information is gained.

Low, Moderate, and High intensity thresholds are defined as the 50%, 90%, and 99% Confidence Intervals, respectively, based on the 5-Year Average of previous seasons.

Pneumonia- & Influenza-Associated Deaths*

LOW < 6.02%	MODERATE 6.02% - 6.19%	HIGH 6.19% - 6.34%	VERY HIGH 6.34% <
-----------------------	----------------------------------	------------------------------	-----------------------------

There have been 21 deaths this week due to pneumonia or influenza-related illnesses (P&I). The proportion of P&I deaths is under the *low* threshold this week. The data shows there was not an influenza specific-related death. The majority P&I deaths that occurred this season were among individuals aged 45 years and older.
