

What is Colorectal Cancer?

Colorectal Cancer occurs in the colon or the rectum. These cancers often begin as **polyps** that grow along the inner lining of the colon or rectum. It is the **2nd leading cause** of cancer-related deaths among men and women in the U.S.

In 2017,
188 **78**

Cleveland
residents were
diagnosed with
Colorectal Cancer

Cleveland
residents died
from Colorectal
Cancer

Incidence & Mortality Rates of Colorectal Cancers in Cleveland, 2008-2017

Between 2008 and 2017, the rate of those dying from colorectal cancers decreased by

31%

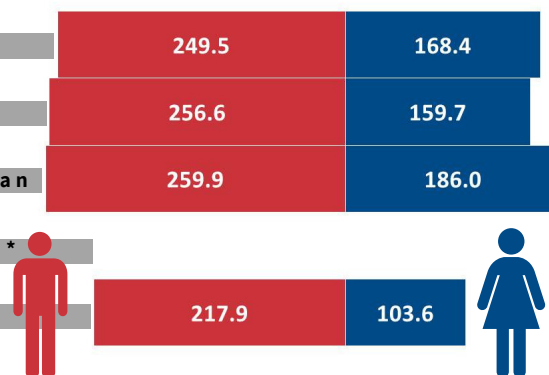

Incidence (Newly Diagnosed Cases)

Age-Adjusted Rate per 100,000 People

Mortality (Death)

Age-Adjusted Rate per 100,000 People

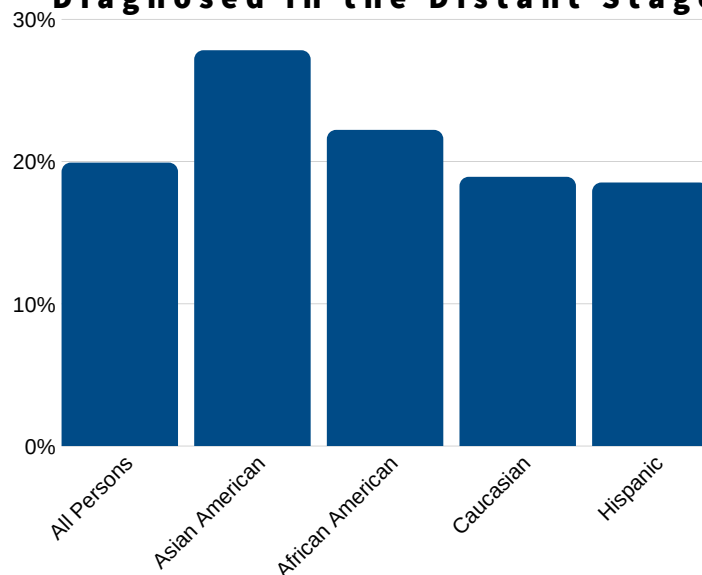

*Mortality rates among Asian Americans were suppressed due to fewer than 10 deaths being observed

Cancer Stages

- In Situ** Non-invasive cancer
- Localized** Confined to colon & rectum
- Regional** Cancer has spread further through the colon & rectum and/or regional lymph nodes
- Distant** Cancer has spread to other organs and distant lymph nodes

% of Cleveland Residents Diagnosed in the Distant Stage

Men are
1.5x
more likely than
women to die
from Colorectal
Cancer

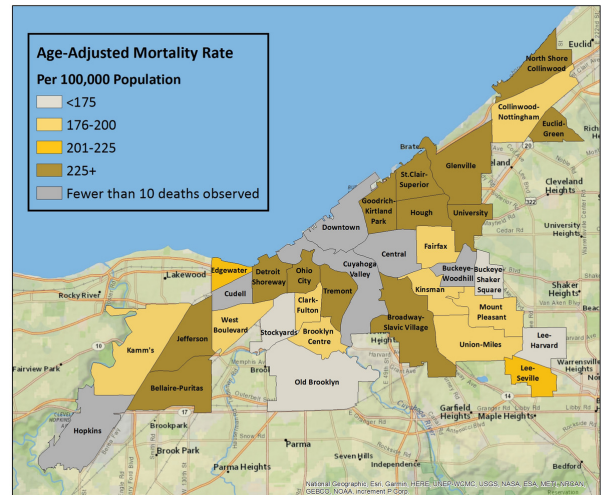

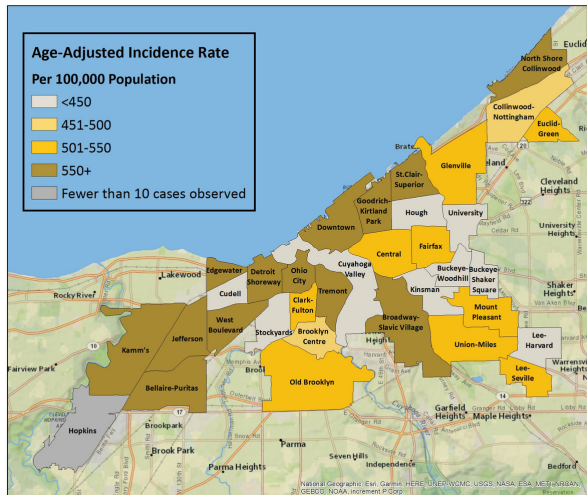

African
Americans are
less likely
to be diagnosed
but **more**
likely to die
than Caucasians

1 out of **4**
cancers
diagnosed among
Asian residents is
in the Distant
stage

Regional Trends in Colorectal Cancer, 2016*

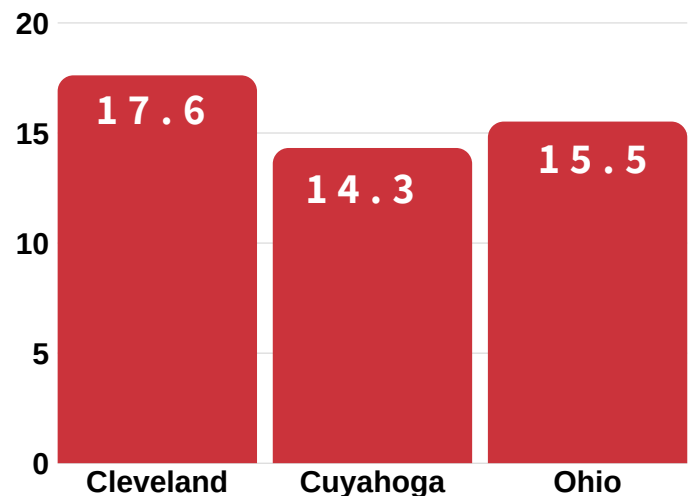

Incidence Rate

Age-Adjusted Rate per 100,000 People

Mortality Rate

Age-Adjusted Rate per 100,000 People

*Regional data are only available for 2016 based on the 2019 Ohio Annual Cancer Report. All other data presented is for 2008-2017.

What are the risk factors?

Things you can change

- Being overweight or obese
- Physical inactivity
- Having a diet that is high in red meat or processed meat
- Smoking
- Heavy alcohol use

Things you cannot change

- Being older
- Being African American or Ashkenazi Jewish
- Having a personal history of:
 - Colorectal polyps or cancer
 - Inflammatory bowel disease
- Having a family history of colorectal cancer
- Having an inherited syndrome

How it is detected:

Colorectal Cancers can be tested through several screening options including stool-based tests as well as with a visual exam (e.g., colonoscopy or sigmoidoscopy) of the colon and rectum.

Types of screening:

Stool-based tests should be done every year. Any abnormality should be followed up with a colonoscopy.

Visual exams should be done every 5-10 years

When to get screened:

For those who do not have any risk factors (e.g., factors that cannot be change), it is recommended that screening begins at age 45 and is routinely completed through age 75.

For those at-risk, it is recommended that screening begins before age 45 and is done more frequently.

All information regarding the description, risk factors, detection, and screening for Colorectal Cancer comes from The American Cancer Society. Colorectal Cancer. www.cancer.org/cancer/colon-rectal-cancer.html

2016 Cancer Incidence and Mortality Rates: Ohio Annual Cancer Report: 2019: Summary of Cancer Incidence and Mortality for 2016 and Cancer Trends for 2007-2016.

Methods:

Data were provided by the Ohio Department of Health. The Department specifically disclaims responsibility for any analyses, interpretations or conclusions. Cancer incidence data from 2017 are preliminary and numbers are subject to change. All rates are age-adjusted using 2010 U.S. Census data. Data are suppressed when fewer than 10 cases are observed.

Cancer Incidence Data Source:

Ohio Department of Health. Ohio Cancer Incidence Surveillance System (OCISS) (2008-2017). Extracted on 4/1/2019. Only those whose residence was geolocated within the City of Cleveland were included in this analysis.

Cancer Mortality Data Source:

Ohio Department of Health. Ohio Resident Mortality Data (2008-2017). Extracted on 3/28/2019.
